Interoperate
Migration Automated

WR2QTP: Interoperate's best-in-class WinRunner to QTP migration solution.

Problem: HP WinRunner announced end-of-life

On February 15, 2008 Hewlett-Packard announced the End-Of-Life of HP Software WinRunner. No support in any form is provided since January 1st, 2011. Based on WinRunner customer feedback, WR2QTP is the HP Silver Business Partner best-in-class migration choice with nearly 100% automated TSL conversion. WR2QTP beats the competition's low TSL conversion rate of <80%.

Migrate WR TSL using WR2QTP:

Our WR2QTP solution automatically translates ~100% of the TSL scripts (the hard part due to test complexity) and >97% of the GUI Map files (with easy QTP visibility). This means WR2QTP has significantly lower risk/time and much less cost compared to manual or partial solutions. Our focus on software solutions provides maximum flexibility for WinRunner customers and partners.

Why Interoperate's Solutions?

Our >97% high-level migration solution was built upon extensive research that employs the power of denotational semantics and rule-based languages. The result is that WR2QTP has the best-in-class automation and reliability.

SPEED + RELIABILITY = SUCCESS

Working with Interoperate:

Using our automatic WR2QTP tool it is extremely fast and easy to migrate TSL scripts and GUI map files from WinRunner to Quick Test Pro (QTP) VBScripts. We have established a partner network to keep customers' migration costs to a minimum and on schedule. Ask your testing group or preferred external testing vendor to contact us to qualify for a free WR to QTP proof of concept for up to 2000 lines of WinRunner code.
